

DIRECTION 03 · TILE MATRIX VARIATIONS

タイル・バリエーション

Six functional permutations of the 9-cell mark — each with a defined role in the system.

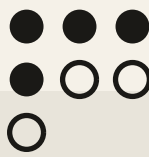

03d

輪郭

Hollow / Empty State

Outlined dots only. Used for empty states, pre-onboarding moments, and any 'not yet recorded' UI surface.

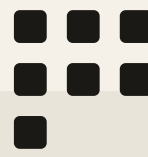

03e

進捗

Progress / Live State

Mixed fill. Use as a live progress indicator inside the product — fills cell-by-cell as the user logs the day's meals.

03f

角丸

Squircle / Small Scale

Rounded squares replace dots. Holds at favicon size and below where round dots blur. Use only when 16px or smaller.

03g

十分の八

Tenths Bar / Literal

5 × 2 grid, 8 of 10 cells filled. The literal eight-tenths math, for moments when the brand thesis must be unambiguous.

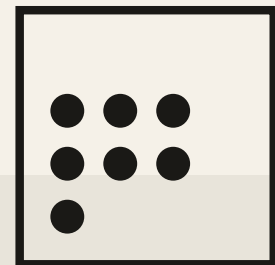

03h

個別

Highlighted / Personal

One cell tinted Koke. Represents 'your cell' in the matrix. Avatar, profile chip, share-card hero treatment.

03i

印

Hanko / Seal

3 × 3 inside a thin square frame. References the hanko tradition. Use for signatures, certificates, the 'completed' state, and merch.

SYSTEM RULES

- All variations share the same underlying 3 × 3 grid (except 03g, which uses 5 × 2 for literal eight-tenths math).
- Missing cells are always lower-right two — never relocate the gap. The gap IS the brand thesis.
- Only one accent color per variation. 03h is the only variation that may carry Koke; all others remain Sumi-on-Suna.
- Animation is permitted only for 03e (progress) and 03d → 03e transition. Other variations are static marks.
- 03b/03c (existing) remain primary for product surfaces. 03d–03i extend the system but never replace the canonical mark.
