

DIRECTION 03 · THE 7.2 PROBLEM

0.2 ドットを、どう描くか

80% of a 3×3 grid is 7.2 dots — not 7, not 8. The fractional dot is the brand thesis itself.

THE MATH

$$7 / 9 \\ = 77.7\%$$

Round down. Honest, but understates the brand.

$$8 / 9 \\ = 88.8\%$$

Round up. Overshoots — feels like 'almost full'.

$$7.2 / 9 \\ = 80.0\%$$

The actual eight tenths. Requires a fractional dot.

FOUR WAYS TO DRAW 0.2

03a

切り捨て

Round Down

7 dots · 77.7%

The current mark. Clean, but mathematically dishonest.

03j

朧 Oboro

Ghost

7 + 0.25 dot · ~80%

8th dot at 25% opacity — the dot you 'almost' have. Reads as 80%.

03k

滲み Nijimi

Wash

7 + ink wash · ~80%

8th dot as soft sumi wash. The calligraphic interpretation.

03l

分数 Bunsuu

Fraction

7 + 0.20 pie · 80.0%

Outlined ring with a 20% wedge. Mathematically exact.

RECOMMENDATION · 03j OBORO

8つ目の点は「ある」。ただし、まだ薄い。

The 8th dot is there. It's just not yet whole — and that approximation IS the point.

WHEN TO USE THE OTHERS

03l Bunsuu — for stakeholders who need mathematical precision (legal, labelling).

03k Nijimi — for calligraphic surfaces (printed merch, packaging, hanko).

03a Round Down — only for tiny sizes (≤16px) where the faded dot disappears.
